

Mastodon and the Fediverse

An introduction to Mastodon and the Fediverse.

Introduction:

- Bob Murphy
- System administrator in New Jersey
- Long-time Linux user, long time Fediverse denizen.
- @murph@hackers.town
- @murph@gardenstate.social
- <https://identi.ca/murph>
- Email: murph@weirdness.com
- Slides available at murphnj.neocities.org

Overview

- The fediverse (a portmanteau of "federated" and "universe") is a collection of protocols, servers, and users.
- Together they form communities that can communicate together.
- Users can exchange short messages, blog-style posts, music, and videos between services.

Some history

- In 2008, Evan Prodromou created a microblogging service called identi.ca using the Ostatus protocol and status.net server software.
- In about 2012, he changed his service to use a new protocol, pump.io. He released the Ostatus protocol to the Free Software Foundation, where it got incorporated into GNU/social. The fediverse continued along for several years.
- March 2016, Eugen Rochco (Gargron) created Mastodon, which used GNU/social with a tweetdeck-like interface. This gained some popularity.
- In 2018, a new protocol called ActivityPub was accepted as a standardized protocol by the W3C. Most Fediverse platforms have adopted it. It was authored by Evan Prodromou, Christine Lemmer-Weber, and others, and it expanded upon the previous services to provide a better and more flexible protocol.

Federation

- Most services are run by a single company or organization. A single silo that your data is trapped in, the only way to share with others is to have them join that service.
- Federation allows users of different services to inter-operate with one another, without creating an account for each shared resource. (Largely)
- System operators can block other instances in case of egregious issues, and users can likewise block users or instances to improve their experience.

Illustration of federation

Centralized

Fediverse

Services available (partial)

- Mastodon,pleroma, misskey
- Pixelfed
- Lemmy
- Write.as, read.as
- Peertube
- Funkwhale
- Mobilizon, gettogether.community

Microblogging

Image hosting

Link aggregator

Blogging

Video Hosting

Audio Hosting

Event planning

More services

- There are many new services that all use the ActivityPub protocol to work together
- More are being created every day, development is rapid.

What some call "Fediverse"...

... is just different social networks speaking
ActivityPub to each other.

Example: Mastodon (default)

The screenshot displays the Mastodon web interface. The browser's address bar shows the URL `https://gardenstate.social/home`. The page layout includes a left sidebar with a search bar, a profile card for `@murph`, and a text input field labeled "What's on your mind?". The main content area, titled "Home", shows a feed of posts. The first post is from `CK's Technology News` (@CKsTechNews@cktn.todon.de) about the release of Linux Kernel 5.15.95, featuring a code snippet for a commit. The second post is from `TILvids` (@tilvids@mstdn.social) about a performance test between Linux and Windows, accompanied by a video thumbnail. The right sidebar contains navigation links such as Home, Notifications, Explore, Local, Federated, Direct messages, Favourites, Bookmarks, Lists, Journalists, Projects, and Preferences. At the bottom right, a "TRENDING NOW" section lists hashtags like `#whiskerswednesday`, `#waterfallwednesday`, and `#wednesday`. The footer includes links for "gardenstate.social: About · Profiles directory · Privacy policy" and "Mastodon: About · Get the app · Keyboard shortcuts · View source code · v4.1.0".

#Linux Kernel 5.15.95 is out

cdn.kernel.org/pub/linux/kerne...

```
signed-off  
commit 3f94c70333f61a593e0b7bfa2953fe01e0844eb  
Author: Arnd Bergner <arnd@kernel.org>  
Date: Fri Jan 27 18:39:44 2023 +0100  
  
platform/x86/amd: pmc: add CONFIG_SERIO dependency  
commit abc209d18fd26a85b2408cc681920d073f9 upstream.  
  
Using the serio subsystem now requires the code to be reachable:  
  
x86_64-linux-ld: drivers/platform/x86/amd/pmc.o: in function 'amd_pmc_suspend_handler':  
pmc.c:(.text+0x86c): undefined reference to 'serio_bus'  
  
Add the usual dependency: as other users of serio use 'select'  
rather than 'depends on', use the same here.  
  
Fixes: 6e0612e0322 ('platform/x86/amd: Disable IRQ1 wakeup for RMI/CIN')  
Signed-off-by: Arnd Bergner <arnd@kernel.org>  
Link: https://lore.kernel.org/r/20230127093950.2360575-1-arnd@kernel.org  
Reviewed-by: Hans de Goede <hans@kernel.org>  
Signed-off-by: Hans de Goede <hans@kernel.org>

Drew DeVault @sdr@cmpwn.c... 10m
On September 16th, GitLab had an unplanned outage lasting ~2x the total duration of all of sr.ht's unplanned outages in 2020
[Show thread](#)

The Privacy Foundation @th... 10m
The "Eliminating Abusive and Rampant Neglect of Interactive Technologies" (or #EARNIT) Act, was introduced by Senator:

Lindsey Graham (R-SC)

And other co-sponsors:

[govtrack.us/congress/bills/116...](#)

This bill naively undermines #encryption.

"Encryption is a powerful tool to protect private information like passwords and financial details. However, it also can be used by criminals..." - Sen. Durbin

Have you contacted your Senator to share your disapproval of this criminalization of #privacy?

Drew DeVault @sdr@cmpwn.c... 12m
Compared to sr.ht's total unplanned outages in 2020, GitHub has

i guess in slightly better news patreon is rolling back it's recent tax bullshit

though i'm sure it'll come back with something even worse soon enough

...version, tax (VAT, GST, etc.) was included in the tier prices shown for specific countries. As an example, this meant that a £5 tier cost £5.05 for certain audiences.
...said us that the way tiers were displayed gave you little control over pricing and over your membership as a whole. This was also a sticking point for creators who had not yet launched their page.
...hear you. As of today, we're rolling back this version of tax inclusive pricing to their original rounded price while we work on a solution that gives creators more control over tier pricing, as well as provides tax inclusive pricing where it's expected.

How to find people to follow

- Look in your local timeline.
- Find interesting people, and follow them.
- See what they post and boost, and look at the people that follow them.
- Search for hashtags that interest you.
- You can follow hashtags in your Home timeline.
- From there, find the people posting about what interests you.

Will the Fediverse stick around?

- Some people reported that since many of the Twitter users that tried Mastodon moved back, that Mastodon is doomed to fail.
- Since the fediverse is not tied to a company that has to provide immediate

profits, slow growth is OK, it allows communities to work to accept new people

graph from the-fediverse.info

New services that federate?

- **Bluesky**

- Controlled by one rich dude. (Sound familiar?)
- Not yet federated with anyone.
- Moderation seems iffy

- **Threads**

- Controlled by one rich dude (again?)
- Seems to have died down after a big initial splash
- Also does not federate with anyone yet.

Conclusion:

- The Fediverse is a way to use the web in a more individual way, either by choosing an instance with a community that suits your needs, or running your own server, and making it exactly the way you want.
- It avoids the advertising, algorithms, and other unpleasantities that plague some other social networks.
- When you join the fediverse, you are joining a community of the instance that you choose, you are not a way for a company to figure out how to make profit from your communication.

Where to learn more:

A few links to find more about the Fediverse:

- General info:
 - fediverse.info -- Nice video explanation, also, subject-based way to find (self-selected) users.
 - fedi.tips -- Comprehensive guide for users.
- Where to start
 - joinmastodon.org -- largest list of Mastodon servers
 - joinfediverse.wiki -- Great information on different fediverse services and instances
 - Fedi.garden -- well-curated list of instances
- Which instance to join (assuming you don't want to spin up your own just yet):
 - fediverse.party/en/portal/servers
- -
- Stats, monitoring service, and list of the known Fediverse:
 - the-federation.info - charts and graphs of fediverse use.

this slide shamelessly stolen from [Mauricio Uribe](#) (with permission) and subsequently vandalized beyond recognition.

Thank you.

- I'll be happy to entertain any questions, or further demonstrate what I can on the fediverse.
